

Wilson Ball Retrievers, Mower and Teaching Carts

Wilson Ball Caddy Line

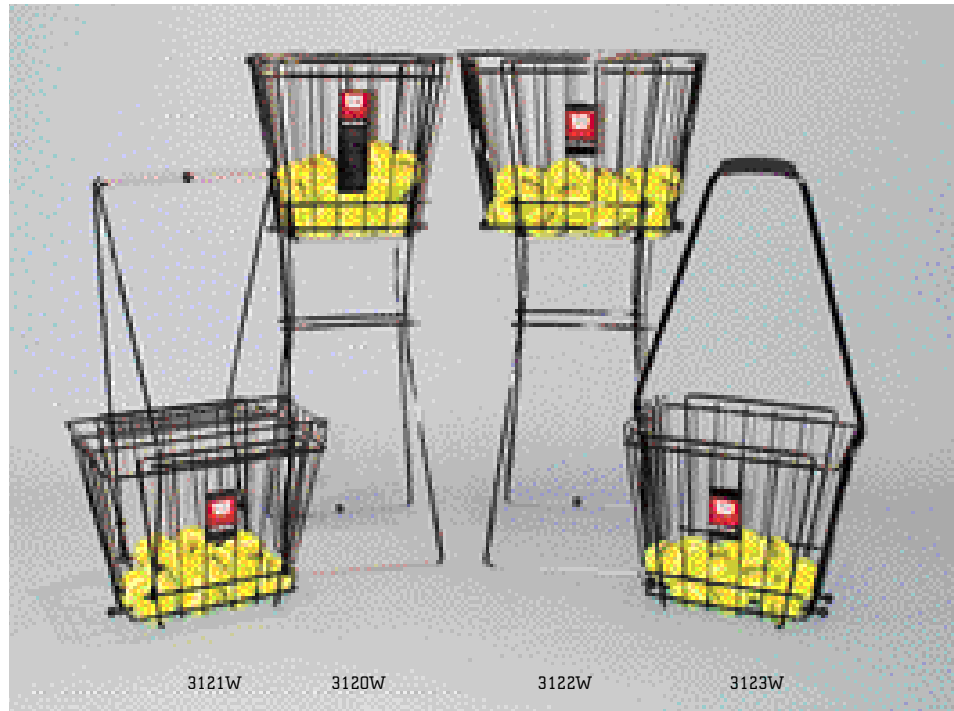

Features

Wilson Ball Caddies feature a rod made of a pliant material (Patent #6,945,578 B2) that flexes slightly as you pick up balls, eliminating bent wires and broken welds. All of our Ball Caddies, except the Pro model, include a stand option that allows you to swing the handles down, raising the basket to waist level for ball access, and swing the handles up, lowering the basket for ball pick up. Lid included.

Durability

We recently redesigned all of our ball caddies, raising the height of the end "V" wires—which hold our flexible center rods—to stop premature wear at this critical point. We also tried and squared all basket components. Our unbreakable basket bottom is constructed without welds, and bottom wires have plastic wear feet—assembled at the factory prior to shipment—for added protection along entire contact points.

See Page 46 for other Ball Retrievers and Mowers
